Occlusafe™

Temporary Occlusion Balloon Catheter

Microballoon Interventions: a technical revolution in transarterial embolization.

Expected benefits from MicroBalloon Embolization (MBE) with Occlusafe are greater tumor or radiological response,[1] improved* clinical outcome,[2,3] better* diagnosis thanks to more visibility[4] and full protection against reflux.[5]*

Product Characteristics

Flow redistribution
Through Pressure Gradient Effect, Occlusafe offers the ability to redistribute blood flow and access the microvascular circulation, leading to an increased accumulation of therapeutics into the target lesion[4] with minimal off-target embolization.[6]

Acces to microvascular circulation
Balloon occlusion with Occlusafe allows a better visualization for improved diagnosis and higher* uptake of embolic into the target lesion.[4]*

Excellence in navigability
Terumo excellence in lesion access technology allows for precision and accuracy in navigation through complex vessel anatomies.
